

## Safety 2.0

Every day, in our company, our workers run risks that sometimes might be heading to severe accidents.

For this reason the law prescribes mandatory training sessions that should be distanced in time. But what is "left" to every worker after a few weeks, or worse, after a few months from the training? How "safely" do they behave? Which are the risks involved, both for the worker and the company? It is impossible to think of gathering the personnel in a classroom every day, the costs involved would be unbearable and this would damage the normal production activities.

Safety 2.0 is born to avoid all this, a continuous education system that provides the necessary training directly to the department, to each worker, using specific material for each job, using sessions that last just a few minutes and certifying their visualization by each collaborator.

Every user logs into the system using the appropriate stations in the company. Each one registers using his badge, having access to the training material: videos, newsletters, job descriptions and the use and maintenance manuals for the machineries in order to **ALWAYS** act safely.

Lasting for a maximum of a few minutes, and using a combination and integration of cartoons, data sheets and clips, our videos explain how to work avoiding dangerous situations for ourselves and other people.

## Safety 2.0

■ Need!	■ Solution?	■ Safety 2.0
To train and to keep every employee updated on safety matters, integrating the mandatory training, which is seldom forgotten, WITHOUT SLOWING DOWN THE PRODUCTION.	To always have specific education material on jobs and risks available for every worker. To supply contents on a daily base.	Thanks to the specifically structured and captivating multimedia contents, lasting for a maximum of 3 minutes each, Safety2.0 is the ideal system to keep every worker updated WITHOUT SLOWING DOWN THE PRODUCTION.
To always have available at any time the certifications related to each training session.	To certify, always, every single training session by precisely filing the data.	Every user has access to Safety2.0 through a personal badge. The system records the access and what has been seen, sending a report both in "excel" format for the needed statistics and in pdf for the filing on a monthly base. Each document is filed in our servers too.
To keep sensitivity "high" on safety and constant knowledge on the matter.	To periodically plan the classroom training session.	Safety2.0 makes always available the updated multimedia material, tracking on its servers every single modification.
To make the job sheet, the newsletters, the instructions related to the machine tools available to each person.	To create copies of all the documentation, to distribute, to file and to verbalize the orders performed.	Safety2.0 can be set up and customized according to the need of every company, in order to have all the needed information material available.
To take advantage of the tariff rate reduction that INAIL considers for the companies investing in safety.	With a "discount" called "oscillation for prevention" (OT/24), INAIL rewards those companies improving their hygiene and safety conditions on the working areas in addition to the minimum ones prescribed by the regulation on the matter (legislative decree 81/2008 and following amendments and integrations).	Safety2.0 helps to reach the requisites prescribed in order to obtain the benefit. The reduction can vary, according to the number of workers, from a minimum of 5% to a maximum of 28%.
To invest in ETHICAL values, paying attention to safety, integrity and life of the workers.	To actually take action in order to improve the safety and the quality of the life of the resources.	Safety2.0, strengthening the competences on safety, prevents the workers from having dangerous behaviors for them and others.
